ROMPETROL RAFINARE Q2 and H1 2017 IFRS CONSOLIDATED UNAUDITED RESULTS

Increasing revenues in the first 6 months of 2017

Rompetrol Rafinare S.A. (symbols, Bucharest Stock Exchange: RRC, Reuters: ROMP.BX, Bloomberg: RRC RO) has released today its Second Quarter and First Semester 2017 financial and operational unaudited results. The figures include unaudited consolidated financial statements for this period prepared by the company in accordance with International Financial Reporting Standards ("IFRS"). The IFRS financial results differ in some respects from the Romanian Standards of Accounting.

Consolidated financial statements of Rompetrol Rafinare include the results of the parent company Rompetrol Rafinare S.A and its subsidiaries Rompetrol Downstream S.R.L., Rompetrol Gas S.R.L., Rompetrol Quality Control S.R.L, Rom Oil SA, Rompetrol Logistics S.R.L and Rompetrol Petrochemicals S.R.L.

The document is posted on our website in the Investor Relations section:

www.rompetrol-rafinare.ro

Rompetrol Rafinare Constanta (RRC) gross revenues reached USD 897 million in Q2 2017 and over USD 1.718 billion for H1 2017. The decrease of this indicator by 9% respectively the increase by 1% as against the same periods in 2016 was influenced by the volatility of international quotations for petroleum products.

Over H1 2017 crude prices were again driven by market oversupply as producers ramped up output to maximize revenue in the lower flat price environment. After a strong start, the steady downward pressure from the supply side resulted in an H1 average price for outright Brent in the range of around \$52 per barrel compared to \$40 for H1 2016.

Several factors converged to make rebalancing possible. Output agreement between OPEC and 11 non-OPEC producers, pushed price levels up to around \$55 per barrel until March, when trend changed in March on fears of a US production recovery and indications of returning Libyan production. In April, another upward move was brought on by Libyan force majeure interrupting exports from an important terminal. End-April prices have started to decrease due to steady upward march of US crude production, return of Nigerian crude oil from force majeure and recovery of Libyan production plus a stubbornly high crude stocks despite record levels of crude intake over Q2.

Urals differentials have generally been stronger year-on-year over H1 2017. In early H1, the additional lightness in differentials could be attributed to the effects of the OPEC/non-OPEC cut. From the second half of H1 onwards the surge was fueled primarily by logistical problems — particularly extensive work on the pipeline network feeding Primorsk. Average spread between Urals Med and Dated Brent stood at around \$1.30 per barrel in H1, roughly 30 cents narrower than H1 2016. Urals Med differentials had their extreme ends at 67 cents per barrel and around \$2.00 per barrel against Dated Brent, representing a much wider range of values than in the same period last year. A significant factor has been a curtailment in Urals loadings from Baltic ports due to pipeline issues. Alongside the shorter loadings caused by the pipeline works, a significant demand increase from Asian buyers helped to strengthen the uptick in prices. India and China have become particularly keen importers of Urals, as multiple indicators show increasing arbitrage flows into these markets.

High stock levels kept gasoline cracks under a firm lid over the early year, and benchmark cracks in Europe, Asia, and the US all coming in below 2016 levels over the first couple of months. A largely seasonal recovery towards the end of Q1 brought with it some optimism, but since then, cracks have largely stagnated. At the same time, recovering middle distillate cracks have allowed for crude intake to remain high, or, in some cases,

ROMPETROL RAFINARE Q2 and H1 2017 IFRS CONSOLIDATED UNAUDITED RESULTS

increase even further. Parts of the pressure on gasoline cracks has clearly come from record crude intake in the US. Here, gasoline production levels moved from strength to strength, with stock builds only recently showing signs of easing. Some of the surplus production has found its way to Latin American countries alling from persistent refinery issues, but this has nonetheless pressured arbitrage flows from Europe to America. Mediterranean gasoline has been trending at consistent discounts to Singapore 95 over the quarter, in contrast to the premiums observed over Q2 2016. A relatively strong Asian market meant that Med gasoline has likely increasingly been drawn into the Middle East, where there has been a chronic outage at Ruwals refinery.

This year, European gas oil/diesel cracks saw a relatively strong H1. Although still trending below the (ive-year average, they were consistently higher year-on-year over Q1 and most of Q2. Cold weather in Q1 underpinned strong regional demand growth which in turn tightened the European gas oil/diesel balance in addition to the seasonal tightening due to maintenance. In Q2, high crude runs kept gas oil/diesel lead to increasing product stocks, which translated into pressure for cracks over May amid a downside in heating requirements.

JBC Energy's standard Urals cracking margin, based on a basket of crudes typically bought by Med refiners improved by a solid \$1 per barrel over the first half of the year relative to H1 2016. The improvement came in combination with a soaring in crude runs, exceeding 2015 levels even though a refinery closure in France last year shrunk the region's CDU capacity. There is little doubt that rampant refinery outages in Central and South America contributed at least part of this good fortune. ULSD volumes from the US tended to find a more profitable home in the likes of Brazil and Mexico, while the rise in Russian ULSD output turned out to be milder than expected. Both factors left the Med ULSD market moderately tight, and elevated middle distillates into the primary drivers of refining margins.

*The information is based on analysis provided by JBC Energy GmbH

ROMPETROL RAFINARE Q2 and H1 2017 IFRS CONSOLIDATED UNAUDITED RESULTS

Refining segment gross revenues reached USD 716 million in Q2 2017 and USD 1.414 billion in H1 2017 decrease by 12% respectively increase by 2% as against the same periods last year, influenced by the volatility of international quotations for petroleum products.

During May 2017 Rompetrol Rafinare has stop production activities within its both refineries - Petromidia Navodari and Vega Ploiesti in order to perform scheduled technological works, established since November last year.

The works were coordinated by Rominserv, general contractor of the KMG International Group, and targeted the optimization and improvement of production flows, aligned to the new processing capacity of the Petromidia refinery, as well as carrying out of some preventive maintenance works for purposes of increasing the level of safety in operating the units and the level of environment protection.

During the mentioned period, both Rompetrol Rafinare SA production facilities provided supplying of petroleum products towards customers from accumulated stocks before shutdown.

In H1 2017 and in Q2 2017, the total throughput for Petromidia refinery was 2.422 million tons, respectively 1.222 million tons, lower by by 13.26%, respectively 18.32% compared with the same periods last year when the total throughout was 2.792 million tons for H1 2016 and 1.495 million tons for Q2 2016. The decrease in volume of raw material processed compared to similar periods last year is due to the planned shutdown in May

The refining capacity utilization was 70.4% in H1, respectively 67.45% in Q2, lower by 22.05%, respectively 31.14% compared with the same periods last year, decrease generated by the planned shutdown scheduled in

In respect of Vega refinery, the total throughput was 152.017 thousand tons in H1, respectively 91.183 thousand tons in Q2, lower by 11.40%, respectively 13.44% compared with the same periods last year when the total throughout was 171.573 thousand tons for H1 2016 and 105.342 thousand tons for Q2 2016.

The refining capacity utilization was 92.13% in H1 respectively 110.52% in Q2, lower by 11.85% respectively 17.16% compared with the same periods last year.

The financial results of the refining segment were influenced by the lower volume of production and sales achieved compared to the similar periods last year due to the planned shutdown in May 2017. During the analysis period, the processing cost optimization programs were continued and the benefits recorded are in line with budget assumptions.

Rompetrol Rafinare S.A. continued to be an important contributor to Romania's fiscal budget with over USD 266 million in Q2 2017 and over USD 520 million in H1 2017.

Petrochemicals segment comprises the petrochemicals activity from Rompetrol Rafinare and the activity of Rompetrol Petrochemicals SRL

Starting 1st of January 2014, the petrochemicals activity was transferred from Rompetrol Petrochemicals to Rompetrol Rafinare S.A., being fully integrated in the propylene, utilities and logistics flow.

In terms of low density polyethylene unit (LDPE), the petrochemicals segment works 100% with ethylene from import. The polypropylene unit (PP) works with 100% raw material from the Petromidia refinery.

The petrochemicals segment is the sole polypropylene producer in Romania and has constantly succeeded to increase its market share on secondary categories of products. Its dynamic development strategy has secured the company a competitive position on the domestic market and on the regional one - the Black Sea and Mediterranean region and the Eastern and Central Europe.

In Q2 2017, the total polymers production for Petrochemicals area was 31.670 thousand tons by 14.06 % lower compared with the same period last year when the total polymers production was 36.849 thousand tons, mainly caused by planned shutdown (PP unit) and unplanned shutdown (LDPE unit).

In H1 2017, the total polymers production for Petrochemicals area was 64.690 thousand tons by 14.36 % lower compared with the same period last year when the total polymers production was 75.538 thousand tons, mainly caused by planned shutdown (PP unit) and unplanned shutdown (LDPE unit).

Note: Marketing segment includes the results of Rompetrol Downstream, Rom Oil, Rompetrol Quality Control Rompetrol Logistics and Rompetrol Gas

The marketing segment had a turnover of over 551 million USD in Q2 2017 and of 1.052 billion in H1 2017, lower by 9% respectively higher by 2% as against the same periods last year.

In Q2 2017 compared to Q2 2016, the Platt's quotations (FOB Med Italy-mean), expressed in the currency of reference, USD were on average by 7% higher for gasoline and by 10% higher for diesel. The decrease of the exchange rate USD/RON by 4% led to an effective increase of 11% for gasoline quotation and of 15% for diesel quotation.

A major influence in changing prices had a reduction in VAT starting with 1st of January 2017, from 20% to 19%, and excise duties on fuels were reduced by 70 eurocents / 1000 liters, cuts that were fully transferred to prices paid by customers at the pump.

As of June 2017, the Rompetrol Downstream's distribution segment contained 789 points of sale, including the network of owned stations, partner stations and mobile stations: expres, cuves and internal bases.
